29 FAIR VALUE OF FINANCIAL ASSETS AND LIABILITIES

Fair value is the amount that would be received on the sale of an asset or paid on transfer of a liability in an orderly transaction between market participants at the measurement date. Consequently, differences can arise between carrying values and fair value estimates. Underlying the definition of fair value is the presumption that the Company is a going concern without any intention or requirement to materially curtail the scale of its operations or to undertake a transaction on adverse terms.

Various judgments and estimates are made in determining the fair value of financial instruments that are recognized and measured at fair value in the Company's financial statements. To provide an indication about the reliability of inputs used in determining fair value, financial instruments have been classified into three levels, as prescribed under accounting standards. An explanation of each level follows the table.

Recurring FV Measurement - June 30, 2021	Level I	Level II	Level III
Long-term investment - at FVOCI	-	20,533,912	
Short-term investments - at FVTPL	50,791,777	-	
Recurring FV Measurement - June 30, 2020	Level I	Level II	Level III
Long-term investment - at FVOCI	-	19,605,539	
Short-term investments - at FVTPL	27,333,808	-	

In the fair value hierarchy in the preceding table, inputs and valuation techniques are as follows:

- Level 1: Quoted market price (unadjusted) in an active market
- Level 2: Valuation techniques based on observable inputs
- Level 3: Valuation techniques using significant unobservable inputs. This category includes all instruments where the valuation technique includes inputs not based on observable data.

There were no transfers into or out of Level 1 measurements.
